### I. OPEN DISASTERS/EMERGENCIES:

### II. WEATHER:

A combination of moderate to strong northeast winds, low humidity, warm temperatures, and dry fuels will bring critical fire weather conditions to the southern Sierra and Tehachapi Mountains and

to the foothills and mountains of Ventura and Los Angeles Counties until 2200 this evening. Winds will lighten tonight, but low humidity, continuing warm temperatures and dry fuels will keep fire danger elevated for Southern California tonight into Monday.

## State Weather Map

## III. FIRES:

### Overall Fire Risk:

#### **Northern California**

Continuing dry weather conditions will keep all dead fuel size classes much drier than normal. Dormant brush fuels will remain in at dry, late fall levels. We are experiencing various stages of long term drought with severe to locally extreme drought conditions covering most of Northern California. There have been record low rainfall totals in many areas this calendar year adding to ongoing longer term drought over the past 2 1/2 years. Fire danger will be somewhat

unseasonably elevated mostly during breezy times, especially at lower elevations in the southern end of the Geographic Area.

### **Southern California**

Warm and very dry conditions will continue to allow for light initial attack activity across the region through the forecast period. Large fires will be unlikely due to a lack of widespread strong offshore winds.
